PROFESSIONAL PROFILE

Technology Leader and Systems Architect with over a decade of experience in fast-paced SaaS startups and tech environments, bridging the gap between technical architecture, product strategy, and engineering culture. Specialized in scaling cloud-native solutions, designing distributed systems, and **pioneering the integration of AI-assisted engineering and Agentic workflows into software delivery**. Active advocate for "Manager of One" environments, Test-Driven Development (TDD), and **leveraging generative AI, custom tooling, and Spec-Driven Development to maximize team velocity and DevEx**.

WORK EXPERIENCE

ALEPHOO | *B2B Healthcare SaaS Startup*

Head of Product and Technology | *Feb 2021 – Present*

Responsible for the technological and functional vision, defining system architecture while ensuring scalability and security.

- **System Architecture & Evolution:** Definition of the technological vision and execution of the migration from a monolithic deployment model to a full Serverless architecture on AWS, optimizing scalability and costs.
- **Hands-on Technical Leadership:** Driving code quality from the front lines via architectural reviews, pair programming, and direct mentorship, fostering team autonomy and code quality while incrementing talent retention.
- **AI Integration & Platform Capabilities:** Architecture and implementation of generative AI and LLM capabilities into internal operational workflows and production application features, enhancing platform functionality and value delivery.

- **AI-Driven DevEx & Workflow Modernization:** Architected and implemented autonomous Agentic Loops, Custom CLI Tooling, and Spec-Driven Development workflows (e.g., devcontainers, git worktrees, harness engineering), boosting engineering velocity and standardizing LLM usage across teams.
- **Compliance Infrastructure:** Led the technical implementation and setup of infrastructure, security controls, and audit logs required for ISO/IEC 27001 compliance, enabling commercial expansion into new countries.
- **Product & Architecture Alignment:** Definition of the technical roadmap and design reviews for critical system components, balancing functional requirements with long-term code maintainability.

BINKS | *IT Services & Software Factory for SMEs*

External Consulting Architect | *Jun 2023 – Dec 2025*

- **Architectural Strategy:** Design of application architectures focused on aligning complex business logic with technical execution across multiple development teams.
- **System Modernization:** Technical guidance and hands-on mapping for transitions between Monoliths and Microservices, establishing scalable structures for growing platforms.
- **DevOps & Containerization:** Standardization of development environments and deployment lifecycles through Docker containerization and Devcontainers to ensure consistency across multiple environments.
- **Automation Pipelines:** Architecture and implementation of automated CI/CD pipelines via GitHub Actions, streamlining dependency management, static analysis, unit testing, and E2E validation.

ALEPHOO | *B2B Healthcare SaaS Startup*

Technical Product Lead | *Jun 2020 – Feb 2021*

- **Architectural Standards:** Definition and promotion of development standards utilizing Domain-Driven Design (DDD), Hexagonal Architecture, and Test-Driven Development (TDD) to ensure code maintainability.
- **Technical Bridge:** Translation of business requirements into technical specifications, managing the product backlog to balance feature delivery with technical debt reduction.

- **Agile Methodologies:** Facilitation of Extreme Programming (XP) and Scrum practices to optimize communication between engineering and product areas.

Solutions Developer / Full Stack Developer | Apr 2016 – Jun 2020

- **Core Development:** Design, development, and deployment of critical platform modules using PHP, JavaScript, and MySQL in high-availability healthcare environments.
- **Modernization & Refactoring:** Implementation of automated validation tools and systematic code refactoring to improve platform stability.
- **Infrastructure Management:** Maintenance and configuration of GNU/Linux server environments and networks, ensuring operational availability for large-scale users.
- **Technical Documentation:** Creation of technical documentation regarding processes and infrastructure to support team onboarding and growth.

EDUCATION

Information Systems Engineering – Universidad Tecnológica Nacional (UTN - FRD) | 2016 – 2020 (Three out of five years completed)

SKILLS & TECHNOLOGIES

- **System Architecture:** TOGAF, Archimate, Microservices, Modular Monolith, Domain-Driven Design, Hexagonal Architecture, Serverless, Event Driven Architecture, SOA, REST APIs, CQRS, Blockchain timestamping.
- **Backend Development:** PHP, Go, Node.js, Typescript, SQL, Redis.
- **Frontend Development:** Javascript , HTML, CSS, Vue, React.
- **AI & Engineering Productivity:** Agentic Loops, Spec-Driven Development, Custom CLI Tooling, Feature Flags, Prompt & Harness Engineering, LLM Integration.
- **Methodologies & Culture:** Scrum, Extreme Programming (XP), Test-Driven Development (TDD), Manager of One, Servant Leadership, ISO/IEC 27001 Compliance.
- **DevOps & Developer Experience:** Github, Docker, Devcontainers, Git worktrees, AWS, Cloudflare, CI/CD, Monorepos, Linux.
- **Languages:** Spanish (Native), English (Advanced), Italian (Intermediate).
